# CONFIGURE. MANAGE. MONITOR.

Ecessa Insight™ is a centralized, browser-accessed, management tool that gives IT staff the ability to configure, manage and monitor any Ecessa solution. Ecessa Insight provides customers an end-to-end management tool that assists in the deployment of any Ecessa solution, as well as access to detailed network and device performance data in the years to come. The application can easily be customized through the use of multiple user-definable apps such as maps, dashboards and reports.

The customizable, widget-based framework enabled by Ecessa Insight allows users to build a single-pane-of-glass view, simplifying many common management tasks such as configuration and monitoring. This highly configurable and flexible interface provides organizations with the ability to view multiple layers of physical and geographical topologies. Everything from configuration changes to an overview of network status can be accomplished on any device, anywhere and at any time. When paired with an Ecessa solution, an organization will not only minimize the time required to manage the network, but they will gain unprecedented insight into network and application performance.
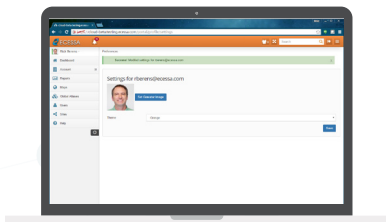

Configure: Ecessa Insight leverages centralized configuration architecture dramatically reducing the effort and technical issues associated with deployment. You can configure the entire network as a whole and simply leverage the global alias feature when adding additional sites.

- One-to-many orchestration tool
- Tiered permissions for security
- Automatic backups with 1-year storage

Manage: Many things can go wrong when you are managing a network; Ecessa Insight lets you diagnose and manage remote devices without sending a technician on site. That means your critical applications have greater reliability and availability.

- Immediate access to all devices
- Location and relationship mapping
- Update groups of devices en masse

Monitor: Through regular polling and real-time alerts from your Ecessa devices, the central dashboard lets you stay on top of what's going on with your devices and your network. Ecessa Insight allows you to define the attributes most important to your organization and displays the status for the device, group of devices, or your complete network of devices. You can also schedule regular reports and get alerts when a device or network state changes.

- Automatic global alerts
- SMS and e-mail notifications
- Site and service checks
- Real-time data analysis
