# ECESSA EDGE™

ECESSA EDGE 75 & 150

If your network relies on connectivity for voice, video, or data, Ecessa Edge will make sure it never goes down. This cost-effective, scalable solution finds the right traffic levels and routing to keep your network humming along. The best part of Ecessa Edge is its reliability. Your network blips will end and installation and upkeep are simple, you might just forget this robust appliance is there, doing its job. But it is, working 24/7 to keep your business connected. Ecessa Edge is scaled right and priced right.

How it Works

Ecessa Edge WAN Link Controllers deliver WAN link failover and load balancing technology that provides networks greater reliability, bandwidth and redundancy.

By leveraging multiple, cost-effective connections, Ecessa Edge provides reliable Internet access and VoIP performance. Ecessa Edge allows traffic to be deployed across multiple Internet and/or service provider networks for redundant link connectivity, delivering automatic real-time failover. This ensures VoIP calls sessions remain active – even in the case of a service provider outage.

Elegant failover and failback

- No dropped calls on failover
- Route traffic away from poor performing ISP links and safely route traffic back when service resumes
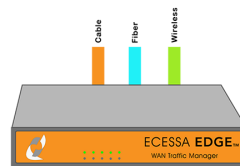

Improve VoIP and application quality

- Ensure VoIP calls route over best performing path
- Prioritize VoIP and Cloud traffic over less important traffic such as Internet browsing

Get what you are paying for

- View reports tracking the quality of your connections - know exactly when outages occur and the duration

Increase your bandwidth

- Increase available bandwidth by leveraging all ISP links
- Leverage new broadband services to lower your transport costs

ECESSA **EDGE**™

EDGE BENEFITS

Increased Bandwidth

Utilize the bandwidth of multiple Internet connections and provide your business with the bandwidth required to support all of your applications.

Stay Connected

Utilize multiple Internet circuits to build a truly diverse and reliable network, protecting your business from the inevitable outages.

Reduced Costs

Reduce WAN expense by leveraging lower cost broadband connections to complement or replace more expensive connections.

Maintain Quality, Set Priorities

Ensure voice, video and data quality and uptime and set custom QoS rules.

Increased Security

Protect your business by taking advantage of the basic firewall functionality.

Ecessa Edge Delivers

• Automatic failover
• Outbound intelligent load balancing
• Built in basic firewall
• Integrated SIP proxy and registrar for VoIP
• Transparent call handling - optimize voice reliability
• Easy to install and maintain
