

ECESSA WANworX®

SD-WAN VIRTUAL INSTANCE - NOW WITH NATIVE AZURE SUPPORT

The industry's most scalable and flexible SD-WAN virtual instance

Ecessa's virtual offering is a full featured SD-WAN solution for your virtualized environments, supporting a multitenant, scalable, cost-effective platform for headquarters, data center or colocations, and Microsoft Azure® public cloud instances. Seamlessly integrate all the benefits of Ecessa's WANworX® solutions, including Never Down® SD-WAN that provides intelligence and control of all WAN connection types, from any provider, in the most challenging network configurations. The WANworX software stack also includes a Layer 7 Next Generation Firewall, encryption, and full routing capabilities. Combined with Ecessa Insight®, this complete solution allows customer networks to automatically see, act and report on all network connection issues.

Compatible with VMWare® ESXi, KVM, and Microsoft HyperV hypervisors, Ecessa's virtual solution offers customers unprecedented performance on their existing industry standard x86 server platforms. With native Azure support, customers can spin up a virtual instance in the public cloud to provide same-IP failover to hosted voice and other cloud services. This superior architecture and design makes the Ecessa virtual product perfectly tailored for maximum throughput performance in a lightweight, efficient, compact offering.

The Ecessa Difference

Ecessa's virtual product seamlessly integrates into your virtualized infrastructure, offering the benefits of SD-WAN for your network. This innovative solution provides many benefits over the competition by being:

- Flexibility: Virtual instances can run on VMware ESXi, KVM, and Microsoft HyperV
- Lightweight: Virtual instances can run with minimal resources; as little as 2GB RAM and 2GB of storage
- High Performance: Includes all the WANworX stack features (Firewall, Encryption, Routing) while pushing greater than 1 Gbps throughput for multiple ISP connections

Now you can have Your SD-WAN - Anywhere™ with WANworX by Ecessa.

For technical specifications on <u>WANworX virtual instances</u>, including throughput performance, see Ecessa's support portal at https://support.ecessa.com. On the Microsoft Azure Marketplace, search for <u>Ecessa.</u>
