

# IT ASSESSMENT

How efficient and secure is your organization's IT environment? When is the last time an assessment was run on your systems to check for issues and areas of opportunity? Without a thorough IT assessment, you might be running at lower proficiency and there could be openings in your infrastructure that could lead to potential network downtime, cyber threats, hacks, and data loss.

This IT assessment collects and compares multiple data points to discover hard to detect issues, measure risk, prioritize areas of improvement and recommend realistic corrections and enhancements.

## Non-Intrusive IT Assessments

In most cases the scans are completed in well under an hour. Our assessment team gathers data in a safely encrypted file and leave no traces of our activity.

## Risk Scoring

We use specially designed algorithms to uncover and assess threats to your network. Your risk score allows you to prioritize the remediation of individual issues and measure network health over time.

## Network Health and Resiliency

Internet outages are frequent among all service providers and even carriers with the best reputations can't prevent a backhoe from cutting a fiber optic link. Our experts examine your network to identify areas of vulnerability, from connectivity and bandwidth allocations through security.

## How does an IT Assessment work?

- 1. Meeting:** We meet with you to better understand your systems and answer your questions.
- 2. Scanning:** We run our non-intrusive scans of your network.
- 3. Reporting:** A concise, meaningful report is produced for your company to review.
- 4. Reviewing:** We meet with you to review risks and offer our recommendations.

It's just that easy! Scheduled your assessment today.

## 4 Benefits of an IT Assessment

- 1** Save **money** - improve efficiency and stop wasting budget
- 2** Gain insight into potential **security** vulnerabilities
- 3** Improve application **performance** and network speed
- 4** Prepare for **upgrades** and new initiatives
